

SheriaLens

To ensure that "Ignorance of the law is no defense" is no longer a trap, but a solvable data problem.

”

Justice delayed is justice denied. In the digital age, it is important to unlock timely and equitable legal resolutions.

”

The Challenge

- The legal system is overwhelmed by a massive backlog of unresolved cases.
- Legal professionals spend countless billable hours manually sifting through historical documents.

Cognitive Overload: "Legalese" is a barrier to entry. Complex syntax and archaic vocabulary alienate the very people the law is meant to protect.

- High costs of prolonged legal research make justice inaccessible for many ordinary citizens.

The Solution: SheriaLens

What is SheriaLens?

SheriaLens is a smart, accessible chatbot that transforms raw, disorganized legal data into actionable, strategic intelligence. It is a highly efficient, tireless research assistant that never sleeps.

Why it Matters?

We empower legal professionals to make faster, more accurate decisions. By drastically reducing preparation time, we lower overall costs and ultimately increase access to justice for everyone involved. It also enables the local mwananchi access to legal information.

Data Understanding

Where do we get our insights? We aggregate information securely and cleanly without the complex jargon.

Court Records

We analyze thousands of historical rulings and judicial decisions from public domain sources to understand established precedents. The caselaws are fetched from eKLR

Legislative Docs

We incorporate the Kenyan constitution (2010) so as to cater for gaps that may exist where the case laws are missing

Data Source

We sourced all our data for this project from the Kenya Law Reports(eKLR) website.

Methodology

1. Collection

Securely gathering vast amounts of public legal documents from eKLR.

2. Processing

Cleaning the data—removing duplicates, standardizing formats, and organizing text securely.

3. Analysis

Using smart algorithms to identify patterns, precedents, and key arguments instantly.

4. Delivery

Presenting the final findings through an intuitive chatbot that summarises the content it has found from the database

Measurable Impact

By adopting SheriaLens, legal teams shift their focus from manual, tedious document review to high-level strategy and active client advocacy. The ordinary mwananchi also gets legal counsel at the palm of their hands

Who Benefits?

Law Firms Streamline intensive research, build stronger arguments based on historical data, and take on more clients without sacrificing service quality.

Corporate Counsel Proactively mitigate legal risks, ensure ongoing regulatory compliance, and handle internal disputes with solid historical backing.

Citizens Benefit directly from lower legal fees and significantly faster resolutions as lawyers spend less time on billable, manual research.

The Road Ahead

Expanding the Database (More Tribunals & Acts)

Multilingual Support (Swahili integration).

Pro-Bono Legal Clinic Partnerships.

Questions?

Thank you for your time and attention.
